

a project of Boise ISSA

Cyber Coach

a collaborative partnership

Four Challenges

1. Students graduating without real-world experience
2. Enterprise triage means some projects are never accomplished
3. Interns languishing on busy-work
4. New hires with 12-months ramp up time

Four Stakeholders

1. SME's from Boise ISSA
2. Students from local colleges
3. Professors
4. Professionals from enterprises

Imagine if you could leverage the curiosity and availability of computer science students to accomplish the project that has been languishing in your To Do List for five quarters.

What would you accomplish if those resources were available?

We envision intern consultants from IT programs at local colleges under the supervision of their program Professor and a Cyber Security Professional volunteer from Boise ISSA delivering 90-day projects that benefit you, the student, and the enterprises investing in the student's future.
